

FMEA – Failure Mode and Effects Analysis with APIS IQ-RM program – advanced ✧ computer-based training

Czas trwania: 2-3 days - 16-24 training hours

Opis:

The aim of the training is to smoothly guide participants from the basic level to the advanced level of work and use of the IQ-RM software. We will focus on functionalities that allow you to speed up work and increase satisfaction with the program.

Program:

- Basic principles of FMEA analysis – reminder.
- The main principles of building structure and content at individual levels.
- Connections between PFC, PFMEA and CP using advanced functions.
- Advanced methods of file management and use of IQ-RM software.

Dodatkowe informacje:

During the training, participants work on computers, thanks to which they have the opportunity to learn about the possibilities of the program on an ongoing basis. The trainer is at the disposal of each participant to answer questions that arise during the course.

After the training, each participant will receive a certificate confirming completion of the training.

Adresaci:

The training is aimed at people who are responsible for product and process development at the level of production plants and engineering and development centers. We invite people who are or would like to be members of expert groups involved in the creation of analyzes and documents improving the product or process.
